FTC ROBOTICS TEAM [XXXX]

From LEGO Bricks to Metal Gears // Sponsorship Program

About Our Team & Transition

After years of successful engineering, research innovation, and core values execution in **FIRST LEGO League (FLL)**, our team has formally stepped up to the **FIRST Tech Challenge (FTC)** platform. This evolution requires moving away from modular plastics and into industrial metal machining, advanced object-oriented Java environments, and structured CAD mapping.

To fund this structural evolution, we invite corporate and local community partners to support our rookie campaign. Your contribution directly impacts young engineers building real-world skills.

Projected Season Budget Allocations

Expense Category	Estimated Allocation ($)	Impact Priority
FTC System Registration & Field Elements	1,500	Critical Base Setup
goBILDA Chassis, Electronics, & Metal Stock	3,000	Primary Build Assets
Manufacturing Tools & Custom 3D TPU Filaments	1,000	Iteration Velocity
Tournament Logistics & Event Operations	2,500	Competition Access

Corporate Support Level Framework

Gold Tier ($2,500+) - Large visual logo positioning directly on our primary metal competitive lift chassis frame, primary placement on all web platform headers, and prominent display on official tournament team jerseys.

Silver Tier ($1,000+) - Medium brand graphic alignment across our website outreach sections and side panel layouts on the competition robot transport bay frames.

Bronze Tier ($250+) - Text recognition inside the engineering blog logs index registry and general community promotional print flyers.
